Dear Catherine

Thank you for your letter outlining the issues with German language teaching in Victorian schools. Obviously I have a personal interest in the promulgation of German language teaching given my own background, but I would also like to outline the reasons why it is important for RMIT (and other universities) to have a strong pool of students proficient in German completing VCE and continuing on to tertiary programs at Victorian institutions.

Germany is a country of significant interest to universities in Australia for a number of reasons. Germany is the home of the modern technological university; it is a research powerhouse and there are many and growing fruitful research collaborations between German and Australian universities. Via institutional links with Germany, Australian universities are also able to access European Union research and student mobility funding opportunities. Student and staff exchanges flourish between the two countries, and German fee-paying students come to Victoria on semester length study abroad programs, contributing to a diversified international student population at our campuses.

Germany is the most important European economy, with great technological & design companies, many of which have a presence here in Victoria. The amount of business exchange and interaction between Germany and Victoria continues to grow, as I plainly saw for myself at the recent Society for Australian German Student Exchange (SAGSE) networking function last week. Some German companies have been sponsoring student exchanges under this program since its inception in 1967, a remarkable commitment to the relationship between the two countries. I am extremely pleased to have been able to commit RMIT to also supporting a student from Victoria to participate in the exchange this year, the first Australian university sponsored scholarship in the Society's history.

RMIT has a broad range of linkages with institutions in Germany - with 16 current partners available for exchange and research collaboration. These institutional linkages allow students to complete a one or two-semester exchange in Germany for study which is credited to their RMIT award at undergraduate and postgraduate levels. Exchanges are possible in the fields of engineering, architecture, business, computer science among others. Many institutions in Germany have very close links to industry and this can provide opportunities for project work. An increasing number of RMIT students are now taking the opportunity to experience part of their study in Germany. RMIT also receives a large number of students from Germany on semester exchange in a variety of disciplines.
